Continued from First Page.

The importance of the work which culminates this evening has been felt by the Commission from the beginning. It has never been thought possible to devise or carry out a system of award that would render absolute justice, or obviate criticism; but it was believed that we could, by the plan with which you are familiar, set nearer that result than did our predecessors in other exhibitions.

We departed from the usual system of international bries and called to our assistance 125 judges from the field States, and an equal number from foreign nations, all selected for their known character and qualifications. Our method also dispensed with graduated medals. It required written reports recommending awards based upon merit, the elements of merits, in the language of the commission, including "considerations relating to originality, invention, discovery, utility, quality, skill, workmanship, fitness for the purpose intended, adaptation to public wants, economy, and cost." The articles exhibited were classified in 28 groups, and to each of these groups a competent number of pulses, foreign and American, was assigned. They entered upon their duties May 24. Each group chose a president and secretary and called to its ais such reportess and experts as were needed.

The rules required that the report upon each article or subject should be signed by some one judge and countersighed by at least a majority of his associates in that group. No limitation has been imposed upon the number of the awards. It is apparent that of twenty articles submitted, each might be worthy of honor for the peculiar merit, or, on the other hard, it might happen that none would deserve special mention.

The Chief of the Bureau of Awards, Gen. F. A. Walker, represented thee commission in, its relations with the judges, interpreting and applying the rules and conveying the decisions of the commission in his relations, overlappings, or technical error as may be expected in so large a mass of work by 250 gentlemen working in 28 groups. The feomission ha

exhibitors to amounce the principal fact as speedily as possible.

Among the many to whom we feel personally grateful stand prominently the tens of thomsands of exhibitors. While commercial and purely material motives and considerations are appealed to in order to induce their participation, it is quite evident that a large number are bree on the occasion somewhat peculiar, not alone from the United States but from many nations, chiefly that they may testify their good will mour festival year in the country (fond applause); and there are many purely governmental exhibits to competive examination that will nevertheless receive the highest of awards, the continuing gratitude of the whole American people. The special manifestiations of friendly interest and cording good will presented by many 'sovereigns can never be forgotica, and they will do much to perpetuate interactional friendships. (applause.)

As the names of the several countries were called and their representatives came forward to receive

and their representatives came forward to receive their lists they were greeted with loud applause. Especially was this true in the cases of Brazil, Egypt, France, Germany, Japan, Russia, Turkey, Great Britain and Victoria, and the United States. In some instances the whole audience rose to its feet and the slapping of hands and shouts of "Bravo" continued for several seconds. The exercises of the evening were closed by the singing of Dudley Buck's Screnade by the Temple Quartet Club and Musec by the First Brigade Band.

THE LEADING AMERICAN HOUSES WHICH RE-CEIVED MEDALS OF MERIT. PHILADELPHIA, Sept. 27.-The method of

awards adopted by the American Contennial Commission differs from the preceding systems. It dispenses with the international jury, and substitutes a body of judges, one-half foreign, chosen individually for their high qualifications. It dispenses also with the system of awards by graduated medals, and requires of the judges written reports on the inherent and comparative merits of each product thought worthy of an award, setting forth the properties and qualities, presenting the considcrations forming the grounds of the award, and avonching each report by the signature of their authors. Taus the velumes of reports will form a complete encyclopedia of the Exhibition, which can be consulted on al disputed questions as to the relative merits of objects of like character, and will be an authority to settle the quarrels of rival manufacturers and inventors about the value of their premiums. The list below contains the names of only a few of those to whom bronze medals have been given; a full list would occupy several pages of THE TRIBUNE, and would be made up quite argely of the names of exhibitors from foreign countries, in which renders here would have only the remotest interest. It is to be understood that these awards of medals are evidences merely of merit, not superiority; the reports to be made subsequently will indicate whose exhibit in each group is held in highest
